Anvil Studio Tutorial

Fastest Way To Enter Lyrics

1. Enter all of the notes for the track.
2. Position the cursor at the first note.
3. Select the lyrics field circled in red above.
4. Change the field above the circled one to "Lyrics line 1".
5. Now, type the lyric for each note, and press the Enter key. The Enter key advances to the next note, ready for you to type your next word without touching the mouse.
6. If you don't want a lyric under the current note, just press Enter again.
7. If you want a dash midway between the current note and the next note, end the current lyric field with "-", e.g. "and-<enter>then".
8. You can use the arrow keys to move the cursor forward and backward.
9. Change the field above the circled one to "Lyrics line 2" and repeat the process.
